## About Us

TechAnax, a Service Disabled Veteran Owned Small Business (SDVOSB), was started specifically to provide our customers with services and solutions from a company with core values and work ethics reflecting integrity, trust, respect and accountability. We pride ourselves as a professional services firm providing customized information technology and management consulting solutions. TechAnax is a member of the Program Management Institute (PMI) and Microsoft Certified Partner. Our solutions and core competencies include; Program Management, Network Design and Engineering, Information Assurance, Service Desk Operations, Data Center Consolidation and Cloud Migration Planning, Acquisition Support and Quality Assurance Procedures. All employees are DoD Cleared.

## Vision

- Provide customers with services and solutions from a company with core values and work ethics that embodies integrity, trust, respect and accountability
- Always return more in value than our customers expect
- Be active supporting the Veteran community

## Capabilities

**Program & Project Management** - TechAnax delivers a proven program and project management methodology, based on industry best practices and standards established by the Project Management Institute (PMI). Our methodology is based on **Standardized** processes, **Tailorable** tools and **Adaptable** methods for **Managing Projects** and programs (**STAMP**). TechAnax's customizable methodology and process for ensuring the highest quality of program management and support services are delivered to our customers.

**Enterprise and Process Assessments/Optimization** - Nobody knows workflow demands better than the agency itself. We realize that, and have personally been working with customers for more than 20 years to deliver successful process and project management strategies. Reality and pressures to "get the job done" often force employees to adopt actions that differ from written procedures. TechAnax ensure mission efficiency and safe/secure procedures are synchronized.

**Strategic IT Planning** - In today's environment strategic planning has re-emerged as a force multiplier aligning business needs to IT systems as resources available continue to decline. TechAnax can assist in planning data center consolidations, migration to the cloud, and the establishment of service level agreements to measure performance.

**New Services Design and Implementation** - It is important that there is a close correlation between operational needs and services provided. Not only will we use STAMP to guide the design but we have strategic arrangements with partners to test new and emerging technologies and get to know how they work before we try and incorporate them into a customer's environment. By replicating an environment and practical evaluation, we can determine if we will meet requirements and if they are affordable and secure. Virtualization, migration, or refreshment, have us implement new technology into your environment and support it without disrupting services.
